Thanks, Mail Carrier

Who can resist the adjustable, customizable, glow-in-the-dark racing system by Skullduggery? I couldn't wait to see these Tracer Racers and the Infinity Loop Track Set in person! After opening up each of the Max Traxxx remotes and setting the four AA's into place, I simply plugged the cars right into the cord on the top and flipped the switch to 'charge.' I love that the remote controls are the actual chargers instead of needing to keep track of a separate cable or plug (which would immediately get lost into the abyss of my house). We found there to be a small learning curve when it comes to driving the RC cars but that sure didn't mean that Little Sister B was any less excited to race again and again and again and again!

*The Stuff of
SUCCESS*

I was born to be a racecar driver but life took me in a different direction. Doesn't mean that love for racing has disappeared and now I get to share it with my kids. The coolest thing in the world is being able to race not only in daylight but also in the dark. Sure that is awesome on the dining room table but we cannot wait until the summer camping season starts. Setting up the track at the campground in the dark is going to be AWESOME! This is definitely going to keep the kids busy for hours at a time...

It's cool enough that the Max Flex RC Tracks glow in the dark, the remote control has variable speeds and it comes with a blazing red remote control car! But, here's the cool part. The glowing track also is flexible! You read right! Why settle for a stagnant, race car track when you can create your own twisting and turning track in a snap?

**A GEEK
DADDY**

My kids and I have been having a lot of fun playing around with the Max Traxxx Tracer Racers Remote Control Infinity Loop from Skullduggery. My-eight-year olds became good Max Traxxx Tracer Racers drivers very quickly. I was having as much fun as my kids were playing with the Max Traxxx Tracer Racers Remote Control Infinity Loop. Be warned that competing against friends and family with these toy cars that literally look like they are burning up the track can become very addictive! My family has spent hours racing against each other.

Let's talk about the glowing track. Because the cars have an undercarriage light it makes the cars look like they are hovering but at the same time it also makes the track underneath light up and glow. You can see the glowing streaks even when the lights are on, but when the lights of the room go out things get crazy cool. I was really impressed with this feature. It makes such an incredible look to the whole toy. It really is a sight to see as you race. The trigger controller is excellent. One charge will have you racing for a good long time. Charging each car is also very quick.

Night Helper

Not only is the Max Traxx set cool and innovative, this racing set has speed and it also glows-in-the-dark! The cars are so fast that they do fly off periodically at full throttle. The kids can race along with the speed of 500 miles per hour! With Light Trace Technology, it's like setting the track aflame! Once you figured how to control the cars on the track you can have hours of fun and yes the cars can make big jumps and land on the other side and keep going...pretty cool right!

The Max Traxx R/C Infinity Loop Track Set is probably one of the coolest gifts we've ever given these boys. They've been playing with it all day long and they are still having fun hours later!

Mem's balancing act

We found the Max Traxx Tracer Racers Remote Control Infinity Loop Track Set was fairly simple to put together, the hardest part for us was getting the loop in place. In a short time, we had everything charged up and ready to test out! The kids immediately commented on the "awesome" size of this track. It is BIG which we LOVE! The controllers were very easy to use, even for my youngest. The speed of these cars is probably the part my kids enjoy the most...watching their cars fly through this track, over and over again.
